

Every day, thousands of Filipinos rely on tricycles for their daily transportation. But finding one isn't always easy.

Passengers waste time looking for available rides.

Parents worry about their children's safety. Meanwhile, many registered tricycle drivers struggle to find enough passengers.

Introducing KarGO! the first mobile platform dedicated to tricycle transportation.

Using KarGO is simple. First, users create an account and register on the app. Next, they select the service they need, whether it's a passenger ride, cargo delivery, or School Service. They then book a nearby registered tricycle driver, track the trip in real time through GPS, and complete the journey with either cash or cashless payment.

With KarGO, passengers can easily book registered tricycle drivers using their smartphones.

Whether you need a ride, cargo delivery, or both, KarGO makes transportation more convenient than ever.

Our School Service gives parents peace of mind by providing reliable transportation with real-time GPS, making every school trip safer.

KarGO doesn't just help passengers, it empowers registered tricycle drivers by giving them more booking opportunities and additional sources of income.

Powered by Android, Here Maps, GPS technology, cloud computing, AI-assisted driver matching, and secure cashless payments, KarGO delivers a smarter transportation experience.

We envision communities where transportation is safer, more accessible, and more convenient for everyone.

KarGO is committed to modernizing local tricycle transportation by combining technology, community, and innovation. Through our platform, we aim to provide safe, convenient, and reliable mobility solutions while empowering local drivers and supporting families, students, and communities every day.

KarGO, more than a ride. A smarter way to move your community.
